Amino acid sequences and disulfide mapping of major proteins of the human saliva clotting proteins after separation on polyacrylamide gel. Coomassie blue R-stained SDS-polyacrylamide gels were prepared of the protein fractions obtained from human whole saliva after separation by vertical polyacrylamide gel electrophoresis. Coomassie blue stained bands, corresponding to blood coagulation proteins and saliva prothrombin, were excised from the gels for analysis of their primary structures by automatic Edman degradation. The saliva clotting proteins were found to consist of 11 and 12 proteins, two of which
