It features a.Q: Boundary condition for time-dependent system The whole system is the solution of a ODE model of a chemical system. It has a temperature  $\theta$  and it is considered as time independent, as well as the reactions. The time is the variable the system evolved in. I

---

need to find its steady state at a different temperature  $\Theta_0$ . My approach is to find a function  $V_0$  such that  $dV(t)/dt=0$ , this could be so with no time dependence, or by taking the limit  $t \rightarrow \infty$ . I will take into account that for the reaction terms it is zero, so  $V_0$  is zero. This is because at steady state the boundary conditions of the solutions are equal at the boundary  $t=0$ . As I said, it is a time independent system, so I take its final value as  $V_0$ .

$$\frac{dV(t)}{dt} = \sum_{k=1}^n \left( \frac{dV_k}{dt} - \frac{V_k \sum_{j=1}^n q_{kj} V_j}{\sum_{j=1}^n V_j} \right) + \frac{V_k (T - T_k)}{\sum_{j=1}^n V_j}$$
